Art Unit: 1616

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan patent publication 2001-072764 (JP-'764)

JP-'764 teaches cross-linked polyglutamic acid in cosmetics which has excellent stability (abstract). A particle size of 10 nm-500 um is specified (paragraph 18). 0.01-30% polymer is specified (paragraph 50). An oil vehicle is disclosed (paragraph 51).

It would have been obvious to make a composition comprising an oil and a cross-linked polyglutamic acid particulate to achieve the beneficial effect of stability in view of JP-'764. As to the claimed particle size range, a range encompassing that claimed is disclosed. An optimum suitable range may be obtained by routine experimentation, absent a showing of unexpected results. In re Boesch 205 USPQ 215 (CCPA 1980).

Claim 4 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 4 "said radiation" has no antecedent in claim 1. Is claim 3 intended?

No claims allowed.
